Maintain Three-Point Contact to Prevent Falls

Mounting or dismounting a large lorry or piece of equipment without hurting yourself seems simple, but many accidents involve this type of injury. The best way to prevent falling while getting into or out of a lorry, tractor cab or heavy equipment is to follow the three-point contact system.

The Three-Point Contact System

Three-point contact is exactly that: *three* of your *four* limbs are in contact with the vehicle at all times. That can be two hands and one foot or two feet and one hand.

No matter what type of access system your vehicle or equipment has available, the three-point system will significantly reduce the chance of a slip or fall because it allows you to maintain maximum stability and support when entering and exiting the equipment. The three points work to form a triangle, distributing your body's weight at the centre.

Remember, the only person who can prevent a fall is you. Here are some simple dos and don'ts to follow when entering or exiting a large vehicle or other construction equipment to avoid injury.

Dos

- Always exit and enter your vehicle facing the cab.
- Slow down and use extra caution in bad weather.
- Get a firm grip on rails or handles with your hands.
- Use the parts designed by the manufacturer for mounting and dismounting. This includes steps,

running boards, traction strips, footholds and handgrips etc.

- Look below for obstacles on the ground before exiting.
- Wear safe non-slip shoes with good support.
- Clean your shoes off; mud, grease and oil can cause you to slip.
- Inspect hand holds and ladders/rungs to ensure they are in good condition.
- Only climb on and off when the equipment is stationary.

Don'ts

- Never carry anything with your free hand when mounting or dismounting. Put the object on the vehicle floor and reach up for it when you get down on the ground.
- Don't rush to climb out of your vehicle or machinery after a long period of sitting. Climb down slowly to avoid straining a muscle or losing your balance.
- Never jump out of construction equipment or vehicles. You may land off balance or on an uneven surface and fall.
- Don't use tyres, wheel hubs or machine tracks as a step surface.
- Do not use door frames, door edges or door handles as a handhold.

Familiarise yourself with these dos and don'ts, and always maintain three-point

The best way to prevent falling while getting into or out of a lorry or other construction equipment is to follow the three-point contact system.
