Watch Your Step on Wet Surfaces

Wet surfaces always present a workplace hazard. Water on the worksite can come from a variety of sources, including rain, cleaning and accident spills, wet winter conditions and activities that require the use of water. Slipping on a wet surface can result in bruises, strains and sprains, lacerations, fractures, head trauma and even fatality.

Be Aware of Hazards

Each jobsite is different, so the way you adapt your workplace to wet surfaces will be designed on a case-by-case basis. However, following these general guidelines is a good start.

- Clean up spills immediately.
- Use caution signs to clearly identify when a surface is wet or likely to become wet and remove them as soon as the surface is dry.
- Barricade affected areas where possible.
- Request to work in an alternative area while your workspace is wet.
- Check for equipment and electrical currents that may not be earthed and wires that are not insulated.
- Use floor mats at the entrances and exits of covered areas to reduce the tracking in of water from outside.
- Whenever possible, work under covered areas during wet weather days.
- Construct temporary shelters such as tents or tarps over worksites that do not have existing overhead protection.

- Ensure good drainage to prevent standing water and speed drying.
- Use pumps to disperse water.
- Be sure to wear shoes and boots with slip-resistant soles and clean them if they become muddy.
- Report any spills or wet areas that you notice to your supervisor.

Anti-Slip Tips

If you are forced to walk through a wet surface, follow these tips to avoid slipping and falling.

- Slow down! Your safety is more important than your rush.
- Take small steps to keep your balance centred.
- Walk with your feet pointed slightly outwards to form a stable base.
- Make wide turns at corners.
- Use handrails if present.
- Concentrate on the surface you are walking on.
- Be prepared for slippery patches.
- Keep your hands out for balance.

Cooperate and Stay Alert

At , we care about your safety. If you have any doubt about the safety of your worksite, whether it concerns a wet surface or another hazard, talk to your supervisor. It takes the cooperation of our entire team to keep our worksite safe!

Wet surfaces are not only a nuisance—they are a safety hazard! Take these steps to protect yourself.
